

sylbreak4all
Regex-based Syllable Breaking for Nine Myanmar Languages

INPUT TEXT
Unicode text / lines
ကျန်းမာတယ်၊ ဒါပေမဲ့ အလုပ်များတယ်။

line

1. PREPROCESS
Remove phrase whitespace
re.sub(r'\s+', '', line)
Historical reference behavior

clean text

2. LANGUAGE SELECTOR
-l / --language
BM · BK · DW · RK · MO · PO · SH · SK · PK

BM / RK / DW / BK / PO SH / SK / PK / MO

3. REGEX RULES: COMMON CORE + LANGUAGE-SPECIFIC VARIANTS

COMMON CORE
BM · RK · DW · BK · PO

((?<[◌])([က-အ])(?![◌]))
| [a-zA-Z0-9 + punctuation + whitespace])

Myanmar consonant starts a segment when
not preceded by VIRAMA (◌) and not followed
by ASAT (◌) or VIRAMA

LANGUAGE-SPECIFIC CHARACTER SETS

SHAN [ၵၢၼ်ႈလၢၼ်ႇ...ၵၢၼ်ႈလၢၼ်ႇ...]
SGAW KAYIN [ကၢၼ်ႈ...သၢဟ်အၼ်း]
PWO KAYIN [က-အ] + Pwo symbols
MON [ကၢၼ်ႈ...ၵၢၼ်ႈ] + Myanmar-style guards

compiled pattern

compiled pattern

REGEX MATCH / SEGMENT STARTS
Python re.Pattern.sub()
For every match: separator + match.group(1)

matched units

4. SEPARATOR INSERTION
-s / --separator
Default: |

| + matched unit

segmented line

5. FINAL CLEAN-UP
Trim leading/trailing whitespace
Result: syllable-token sequence

final text

-p

OUTPUT
|ကျန်း|မာ|တယ်||ဒါ|ပေ|မဲ့|အ|လုပ်|များ|တယ်||

Optional -p / --print
input: ...
output: ...
